                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          04
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ы
                                                                                                                                            The present sequence is that of survival construct C12ScFas in which the interleukin-4 inducible epsilon promoter-chimeric Fas(CD95)-internal ribosome entry site-hygrowycin-bowine growth hormone polyA tail is placed in the C12s vector backwards so that no leaky transcription occurs through the CMV promoter. Methods of the invention utilise diphtheria toxin for screening purposes, especially for identifying modulators of 1gE synthesis, secretion and switch rearrangement. A claimed method of screening for bloactive agents capable of inhibiting the IL-4 inducible epsilon promoter (see AAF30941), which is involved in 1gE switching, comprises: combining a candidate bloactive agent and a cell that does not endogenously express heparin-binding epidermal growth comprises; combining HBEGF, inducible epsilon promoter and nucleic acid comprising the IL-4 inducible epsilon promoter and colling diphtheria toxin to the cell; and determining whether the cell is dead. Survival constructs carrying a death gene and a dring selectable marker have been used to generate an epsilon concert survival cell line. Inhibitors of 1gE synthesis can be identified that prevent the production of 1gE and reduce or eliminate an allergic response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 GlyTrpLeuCysLeuLeuLeuLeuProlleProLeulleValTrpValLysArgLysGlu

C comprising an inducible epsilon promoter-chimeric Fas (either CD8

C or mLyL2)-IRES-lydromycin-bovine growth hormone poly-A tail placed

In vector Cl2s backwards so that no leaky transcription occurs

through the CMV promoter. It is an example of a death gene that

C provides a nucleic acid that encodes a protein which causes a

cell to die. The death gene can be used as a reporter gene in

methods of the invention used to screen for modulators of 1gB

C synthesis, secretion and switch rearrangement. The method

comprises combining a candidate bloactive agent, optionally linked

to a fusion partner, with a cell comprising a fusion nucleic acid

composed of the IL-4 inducible epsilon promoter (see AA234932), and

a reporter gene, such as the present death gene. The promoter is

then induced with IL-4 or IL-13, and the presence or absence of the

contract gene is detected. Absence of the reporter gene indicates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Methods, cell lines and vectors for screening for modulators of immunoglobulin E synthesis, secretion and switch rearrangement

The present sequence is that of survival construct Ahhhh in which the interleukin-4 inducible epsilon promoter-chimeric Fas(CD8 or mLyt2)-internal ribosome entry site-hygromycin-bovine growth hormone polyA tail is placed in the Cl2s vector backwards so that no leaky transcription occurs through the CMV promoter. Methods of the invention utilise diptheria toxin for screening purposes, especially for identifying modulators of IgE synthesis, secretion and switch rearrangement. A claimed method of screening for
                                                                                                  Screening for agents capable of inhibiting a promoter, especially interleukin-4 inducible epsilon promoter involved in immunoglobulin production, by using diphtheria toxin constructs -

```
bloactive agents capable of inhibiting the IL-4 inducible epsilon promoter (see AAF30941), which is involved in IgE switching, comprises: combining a candidate bloactive agent and a cell that does not endogenously express heparin-binding epidermal growth factor (HBEGF) and which comprises a fusion nucleic acid comprising the IL-4 inducible epsilon promoter and a nucleic acid encoding HBEGF; inducing the promoter with IL-4; adding diphtheria toxin to the cell; and determining whether the cell is dead. Survival constructs carrying a death gene and a promoter survival cell line. Inhibitors of IgE synthesis can be identified that prevent the production of IgE synthesis can be eliminate an allergic response.

/note="Organ: breast; Vector: puc18; Site_1: Smal; Site_2: Smal; A mini-library was made by cloning products derived from ORESTES PCR (U.S. Letters Patent application No. 196, 716 - Ludwig Institute for Cancer Research) profiles into the puc 18 vector. Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Email: asimpsoneludwig.org.br
This sequence was derived from the FAPESP/LICR Human Cancer Genome Project. This entry can be seen in the following URL (http://www.ludwig.org.br/scripts/gethtmi2.pl?tl=6t2-0V4-BT0407-020 300-122-d096t3=2000-03-026t4=1)
Seq primer: puc 18 forward High quality sequence start: 50 High quality sequence stop: 395.
